

1. Create three variables in a single line and assign different values to them and make sure their data types are different. Like one is int, another one is float and the last one is a string.

A terminal window titled "Pradeep — Python — 87x26" with a standard macOS window header (red, yellow, green buttons). The terminal shows the following text:

```
Last login: Fri Jun 26 15:32:38 on ttys000
The default interactive shell is now zsh.
To update your account to use zsh, please run `chsh -s /bin/zsh`.
