5 .Write a program to complete the task given below:

❖ Ask the user to enter any 2 numbers in between 1-10 and add both of them to another variable call z.

❖ Use z for adding 30 into it and print the final result by using variable results.

```
30
>>> x=int(input("Enter the 'x' value in between (1-10) :"))
Enter the 'x' value in between (1-10) :5
>>> y=int(input("Enter the 'y' value in between (1-10) :"))
Enter the 'y' value in between (1-10) :7
>>> z = x+y
>>> result = z+30
>>> result
42
>>>
```
